

Technology Assessment

The Technology Assessment Group provides engineering support to the International Assessment Program and the Industrial Partnerships and Commercialization Program.

International Assessments Program

Studies foreign science and technology issues

Foreign nuclear programs are the program's core competency. Enabling technologies include

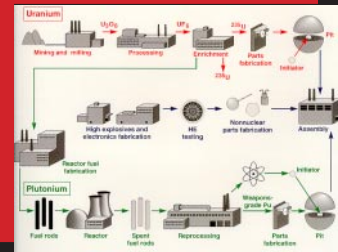

- Fissile materials acquisition
- Testing of weapons and components
- Stockpile composition and maintenance
- Political decision making

Supports DOE in its mission to assist in the international export control regime

Provides technical support on dual-use technology issues

Country-specific analysis of the nuclear weapons acquisition process

Industrial Partnerships and Commercialization Program

LLNL is committed to promoting partnerships with private industries and universities. Technologies developed through IPAC not only help to fulfill the Laboratory's mission goals in a cost effective way, but are moved into the marketplace where the advances positively impact the US economy.
